**1. A converged network \_\_\_\_\_.**

- A. can transmit voice, video, and data over a single infrastructure
- B. deploys circuit-switching instead of packet-switching
- C. can serve more users than a conventional IP network
- D. features an edge-oriented architecture

**Correct: A**

**2. Ethernet and IP are the fundamental technologies for converged networks because they \_\_\_\_\_. Select TWO.**

- A. offer mature standards
- B. tolerate high packet loss
- C. are widely deployed
- D. offer high levels of security
- E. aren't disrupted by power outages

**Correct: A C**

**3. How does the ProCurve Adaptive EDGE Architecture support convergence?**

- A. by enhancing edge compression of video streams
- B. by ensuring that traffic is prioritized at the edge of the network
- C. by translating analog signals to digital signals at the edge of the network
- D. by supporting a variety of Layer 3 protocols at the edge and in the core of the network

**Correct: B**

**4. In a converged network, what does video traffic require in comparison to voice traffic?**

- A. less delay
- B. higher priority
- C. more bandwidth
- D. more expensive cabling

**Correct: C**

**5. What is the measurable degree to which an IT staff can successfully guarantee the predictable behavior of network services?**

- D. Guarantee of Service (GoS)

**Correct: C**

**6. Click the Task button. Match the type of traffic (voice, video, or data) with the appropriate description.**

Traffic type	Characteristics
(place here)	Low tolerance for delay and jitter. Can tolerate some packet loss.
(place here)	High tolerance for delay and jitter. Requires retransmission of lost packets.
(place here)	High tolerance for delay. Low tolerance for jitter. Can tolerate some packet loss.

**Correct:**

**Green choice3---->Yellow Choice1**

**Correct:B**

**10.Why does network congestion often cause more network congestion?**

- A.QoS settings require switches to retransmit all real-time traffic.
- B.TCP applications request retransmission of dropped packets.
- C.802.1p priorities are ignored after congestion reaches a user-defined threshold.
- D.RSVP routers allocate more bandwidth to UDP applications.

**Correct:B**
